

Overview of Design

- Well-designed REST API
- Basic steps:
 - Install .NET Core
 - Create a web application with ASP.NET
 - Choose a Web API application
 - Startup.cs
 - Global.asax
 - Create an API controller
 - GET method to list items

Implementation of Design

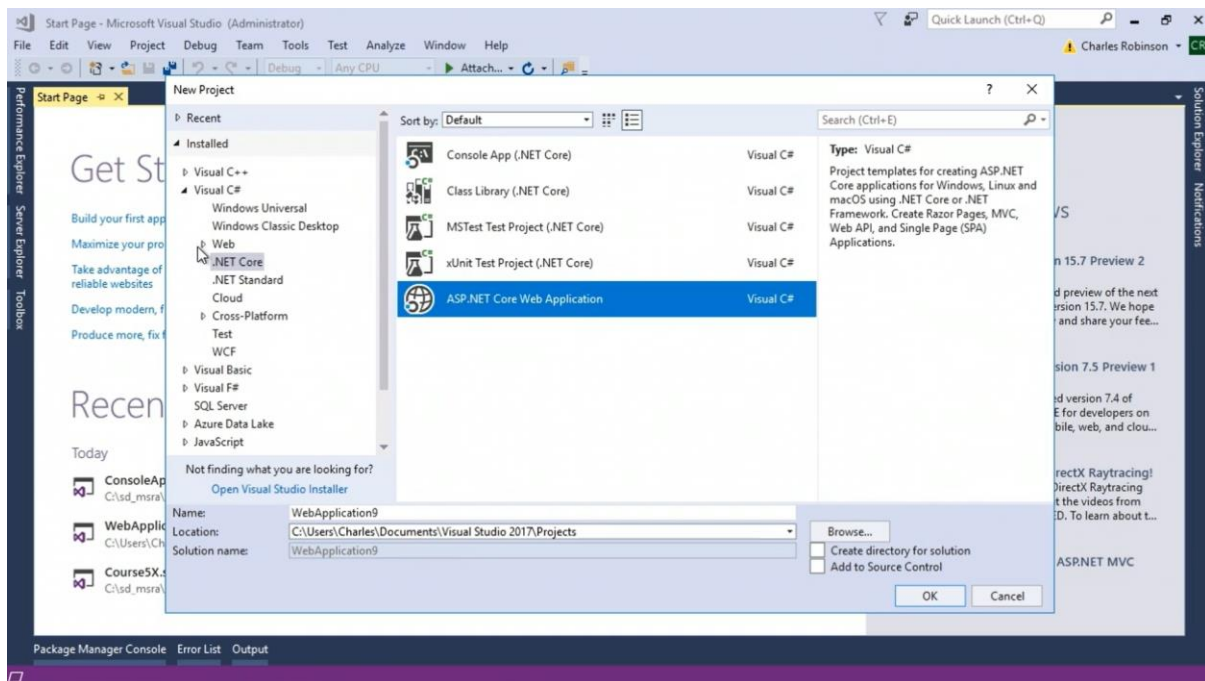

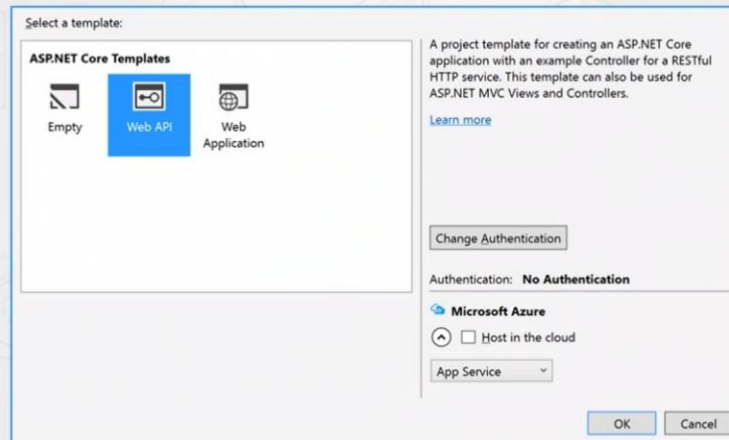

- Data Model
 - Design the model according to the specifications
 - Object representing data in the app
- Define the controllers
 - Define the necessary controllers for the API
 - Object that handles requests
- Configure the controllers
